

# VILPE<sup>®</sup> Underlay 2K Seal

## 100% sealing of the underlay

- The only solution ensuring that the joint between the underlay and the roofing material is fully waterproof.
- Prevents water from entering below the underlay from the pass-through.
- Works well with breathing underlays.
- Easy to install.
- A patented solution.

## Schematics

## Compatibility with VILPE pass-throughs

- VILPE Tile pass-through
- VILPE Unitle pass-through
- VILPE Vittinge pass-through
- VILPE Evo pass-through
- VILPE Classic Vino pass-through
- VILPE Aalto pass-through

- 1.** The rubber sleeve reaches the pass-through regardless of the height of the interspace
- 2.** The flexible rubber sleeve is easy to attach on the spikes of the pass-through
- 3.** The rubber sleeve is easy to maneuver during installation
- 4.** A seamless sleeve ensures complete waterproofing
- 5.** Spikes have been sharpened to easily puncture the underlay

## Materials

VILPE 2K is made of two environmentally friendly plastic raw materials: hard polypropylene (PP) and soft rubber-like thermoplastic plastics, which are seamlessly moulded together resulting in a durable joint. The materials are recyclable, weather-resistant and shockproof. The product can withstand continuous temperatures of -30°C – +80°C and temporarily -40°C – +120°C.
