

October 2, 2015

**Dear Customer,**

SK Tuote Oy has made an improvement in the pre-insulated VILPE<sup>®</sup> Ø 110 mm sewer and exhaust ventilation pipes. The modification applies to the following items:

**VILPE<sup>®</sup> Ø 110P/IS/350  
sewer ventilation pipe**

74132 Black  
74134 Brown  
74136 Green  
74137 Grey  
74138 Red  
74139 Brick Red

**VILPE<sup>®</sup> Ø 110P/IS/350  
(sewer) exhaust ventilation pipe incl. cowl**

741402 Black  
741404 Brown  
741406 Green  
741407 Grey  
741408 Red  
741409 Brick Red

Temperature variations and poorer adhesive properties of new environmentally friendly, water-based and CFC-free polyurethane have in a few cases caused a slight declination of the inner pipe. As a result humidity has penetrated to the insulation and further to the roofing structure.

The improved model is now pre-insulated using a pre-molded EPS (Styrox) cylinder. The new insulation solution and the improved construction of the product prevent the insulation layer from declining and remove the potential problem.

Following the improvement, the product features will slightly change as described below:

- Length of the inner pipe is decreased down to the length of the non-insulated 110 mm pipe
- Length of the casing pipe is decreased by approximately 40 mm, the nominal length however exceeds the required length of 300 mm.

Shipments of the improved model will start 01.11.2015 or sooner if the present stock of the previous model is finished. This is a quality measure we have decided to take to underline our commitment to uncompromised quality. The old model is a fully functional and safe to use.

For further information, please, do not hesitate to contact VILPE<sup>®</sup> sales team at +358 20 123 3222 or [sales@sktuote.fi](mailto:sales@sktuote.fi).

Sincerely,

SK Tuote Oy

Jonas Lindeman  
Sales Director
