

KTV Felt ventilation set

New KTV Felt ventilation set for felt and slate roofing

Improved grille and easier installation

VILPE[®] KTV Felt ventilation set is designed for ventilation of roof constructions, roof space and attic. In regions where the temperature don't go below freezing, the KTV ventilation set can be used also as an outlet of sewer ventilation, by connecting it to the sewer ventilation pipe.

The grille of renewed VILPE[®] KTV Felt has a new and better design that keeps the water out even in the roughest weather conditions. The new KTV Felt is not only easier to install but it is also 20 mm higher than its predecessor which makes it better for low pitched roofs and unexpected snow.

The KTV ventilation set is equipped with two protective grids to keep birds from getting into the roof space as well as a special membrane preventing water from coming in but letting air pass through unobstructedly.

Dimensions

Package

Contents

- Pass-through
- Lid
- Installation instructions
- Fixing screws

Dimensions of the carton box: 440 x 315 x 220 mm.
